

Voice Smart Networks Launches Cellular Gateway Solutions To Benefit Local Businesses

Partnership With ITS Telecom To Reduce Cellular Phone Costs By 50%

VENTURA, CA – December 15, 2006 - Voice Smart Networks, a leader in business communications, announced today that it has launched Cellular Gateway solutions to benefit local businesses. The company recently formed a strategic partnership with ITS Telecom US to deliver an innovative technology that has the ability to reduce an organization's cellular phone costs by 30% or more annually.

ITS Telecom's Cellular Gateway solutions integrate mobile phones to the company's traditional (PBX) phone system in a highly economical manner. When the mobile user places a call to the Cellular Gateway they are connected to a PBX dial tone. The mobile user has several options such as dialing an internal extension or making a long distance or toll free call. For outbound calls from the office to the mobile user, the cellular gateway converts that desk phone into a cell phone. All of this activity is viewed by the cell network as mobile to mobile activity with zero paid minutes used. If an outside call is made, the Cellular Gateway bridges the mobile phone to the PBX, then it routes the call to the specific party, and the company is charged normal landline rates. As a result, the Cellular Gateway reduces both long distance charges and paid minutes used by company cell phones. Companies now have the option of immediately reducing the paid minutes in their cell plans. Currently, ITS Telecom's Cellular Gateway supports the GSM network (Cingular and T-Mobile) with the CDMA (Verizon and Sprint) version due out second quarter of 2007.

"The Cellular Gateway has the potential of reducing corporate cell phone bills by a minimum of 30%,"

said Fred Palacios, director of sales for ITS Telecom U.S. "The gateway is actually very simple. Basically, all calls between the office and mobile users are routed through the gateway and recognized as mobile-to-mobile activity by the carrier with no paid minutes used. Voice Smart Networks' customers that implement any of our Cellular Gateway products will reap immediate benefits by dramatically improving their bottom line. We're excited about this new relationship with one of the leading business communications providers in the industry."

"We're constantly reviewing, analyzing, and testing new technology to help our customers achieve their business goals," stated Steven Gran, sales manager of Voice Smart Networks. "Identifying that one technology that can significantly impact an organization is exciting. During this process, we have two objectives in mind – to find technology that increases profitability and give the companies we serve a competitive advantage. We believe that ITS Telecom's Cellular Gateway is a valuable investment for many of our customers."

ABOUT VOICE SMART NETWORKS

Founded in 1982, Voice Smart Networks is committed to establishing and maintaining a dynamic partnership with every customer. Extensive technology and service experience allows Voice Smart Networks to team up with industry leading manufactures such as Mitel, ShoreTel, and Inter-Tel to develop an understanding of each customer's unique telecommunications requirements, and in turn, custom design solutions that increase their customer's profitability and make their

customer's more competitive within their own industry. For more information and to discuss "real case scenarios" please call 800-500-2696 or visit us at www.voicesmartnetworks.com

ABOUT ITS TELECOM

ITS Telecom US is a leading manufacturer of innovative telecom add-on products. ITS Telecom US serves customers across North America, from governmental to private institutions through a solid network of distributors and OEM Partners. Our wide array of digital, DSP-based products include Voice Mail Systems, Auto Attendants, Voice Announcers, Music on Hold Units and Door Phone/Access Control Units.

Specializing in proven telecom add-on product technology, ITS Telecom provides cost-effective solutions, which evolve with the ever-changing needs of your business and optimize your systems applications. Our solutions are all easy to integrate and manage, simple to use and highly reliable. In addition, price points and feature sets are designed to accommodate the needs of small to medium sized businesses.

ITS Telecom US is committed to continually upgrading customer service and guarantees customer satisfaction every time by providing optimal solutions for businesses, reducing costs and utilizing smart technology. All ITS Telecom US products have been designed with a high performance - low cost ratio, which perfectly suits the needs of different markets and continuously provides unsurpassed customer service and technical support.
