

Voice Smart Networks Remains at the Forefront of the Telecommunications Industry by Expanding its Offering to Include State-of-the-Art Fleet Management Solutions

Reseller Relationship with Networkcar® Enables Customers To Take Advantage of Cost-Effective GPS Tracking Systems

VENTURA, CA — July 27, 2005 — Voice Smart Networks, an industry leader in telecommunications, announced today that the company has formed a reseller relationship with Networkcar, the leading provider of services for remotely monitoring the performance and location of fleet vehicles. Voice Smart Networks will offer Networkfleet, Networkcar's wireless fleet management solution, which merges patented remote diagnostic systems with GPS-based Automatic Vehicle Location technology. This relationship enables Voice Smart Networks to become the first telecommunications company to provide its customers with such a high level fleet management solution in its service area.

Networkfleet, winner of the 2005 *Telematics Update Magazine's* Best Commercial Vehicle Solution Award, helps fleet operators reduce operating costs and improve productivity by providing remote online access to detailed vehicle information ranging from vehicle location to fuel efficiency trend data, 24/7. Vehicle location and diagnostics information enable

fleet managers to reduce operating costs, improve driver productivity and more efficiently manage their assets.

Networkcar's patented diagnostic information is a key tool that allows fleet managers to identify problems at an early stage and take a more aggressive approach to maintenance. The results are increased fleet vehicle uptime and decreased costs. By getting immediate access to Networkcar vehicle speed reports, idle time data and fuel efficiency trends, fleet managers can improve driver behavior and vehicle condition and lower costs associated with accidents, poor driving habits and less than optimal maintenance regimes.

"At Voice Smart Networks, we have the exact same issue as our customers do when it comes to effectively managing a fleet of vehicles. We're constantly on the road servicing thousands of businesses in the area and we need to do it as efficient as possible," said Steven Gran, Sales Manager for Voice Smart Networks. "After conducting a thorough analysis of fleet management solution providers, we identified Networkcar as an ideal partner because of their superior technology and the phenomenal reputation they have in the industry. Their value

proposition was so powerful that we felt it was important to introduce such an innovative tool to our customer base. We strongly believe that it is our duty as our customers' telecommunications provider to bring solutions that increase their profitability and gives them a competitive advantage in their marketplace."

ABOUT VOICE SMART NETWORKS

Founded in 1982, Voice Smart Networks is committed to establishing and maintaining a dynamic partnership with every customer. Extensive technology and service experience allows Voice Smart Networks to team up with industry leading manufacturers such as Mitel, ShoreTel, and Inter-Tel to develop an understanding of each customer's unique telecommunications requirements, and in turn, custom design solutions that increase their customer's profitability and make their customer's more competitive within their own industry.
