

## **VOICE SMART NETWORKS LAUNCHES A MOBILE DEVICE MANAGEMENT PROGRAM TO MONITOR AND SECURE DEVICES THAT ARE ATTACHED TO CUSTOMER NETWORKS**

LOS ANGELES/VENTURA/ORANGE COUNTY/SAN DIEGO — May 28, 2013 — Voice Smart Networks, a leading unified communications provider, announced today that the company has launched a Mobile Device Management Program to Monitor and Secure Devices that are attached to customer networks. With the proliferation of Smart phones and tablets in today's business world, companies need a way to monitor and secure mobile devices that enter their company space. Whether a mobile device is company-issued or employee-owned, Mobile Device Management (MDM) is the fastest, most comprehensive way for organizations to centrally secure devices and protect their networks from intrusion.

Smartphones are here to stay and businesses need to be certain that they have an infrastructure established to bring these devices into the workplace. According to *The Cisco Visual Networking Index (VNI) Global Mobile Data Traffic Forecast Update*, "the growth of global mobile data traffic in 2012 is up 70%" from the previous year and when comparing Mobile traffic in 2012 versus entire Internet in 2000 we find that mobile traffic today has twelve-folded that of the entire Internet in 2000."

The best MDM solutions perform several functions and have a set of unique characteristics which make them the best fit for

small to medium-sized businesses. First, they must integrate into existing networks well. Many MDM solutions integrate seamlessly into enterprise systems and don't require on-site servers or network reconfiguration. Another trait of a great solution is the ability to remotely locate, lock and wipe lost or stolen devices. This is vital for enhancing security, especially in an environment with shared data and content. Many solutions rely on encryption settings and established passcodes in order to monitor device compliance and detect potentially unsafe devices before they make it on the network.

"The growth of mobile is representative of a culture shift where people expect instant communication and want to be connected," stated Mark Wadnizak, Partner of Voice Smart Networks. "This has tremendous implications for our industry and as we've noticed this evolving over the years we knew that our customers needed some way to bring security and data management to their networks. That's exactly why we have spent substantial time, effort and energy investing in leading edge technologies so our customers can be better equipped to protect their businesses. We consider it our duty to equip our customers with the best technology tools available, so they constantly have a leg up on their competitors. In the end, making them successful, keeps us

successful and prolongs our relationship."

### **ABOUT VOICE SMART NETWORKS**

Founded in 1982, Voice Smart Networks is Southern California's leading data and voice company. The company's mission is to increase its customers' profitability, improve their productivity and give them a competitive advantage by implementing the right technology. Voice Smart Networks is the only provider that protects its customers from the two risks of technology - obsolescence and cost. As its customers' trusted technology advisor, Voice Smart Networks has earned the position as the market leader and its customers' business through quality products and services.

As a premier member of Technology Assurance Group, Voice Smart Networks is able to fulfill all of its customers' technology needs. This means that the organization is the ultimate resource for business phone systems (VoIP and Session Initiation Protocol (SIP) provisioning), Managed IT Services, Network Security, Video Conferencing and Disaster Recovery.
